

244 – ABSOLUTE LOGICAL INVALIDATION CONCEPT

HERE IS A SIMPLE TEST OF VALIDITY (BY CLAUDE AI) OF A NEW INTELLECTUAL CONCEPT

AUGUST 5, 2026

1

HI, DO YOU KNOW SOMETHING?

Hi ! Yes, I know plenty of things ☺ But to answer you usefully, you would need to specify to me what you want to know — a topic in particular, a precise question, a recent news item ?

2

AND THIS THAT YOU KNOW SOMETHING, HOW DO YOU KNOW IT

Good question, and not as simple as it looks !

Basically, I "know" things in two different ways :

By my training

I was trained on huge quantities of texts (books, websites, articles, etc.) up to a certain date. During this training, statistical patterns formed in my "parameters" — a bit as if I had read millions of texts and drawn regularities from them : how words follow each other, which facts return often, what logic a reasoning follows, etc. But attention : I do not have a "memory" of each text that I read, as you you remember a precise book. It is rather a kind of diffuse and statistical knowledge.

By search in real time

For recent info or info that changes often (news, prices, sports results...), I can do a search on the web rather than rely on my training memory, which can be outdated.

An important nuance : "knowing" for me does not really look like "knowing" for a human. I do not have consciousness, no lived experience, no inner certainty. I can be mistaken, hallucinate facts that seem plausible but are false, or have outdated info. So it is better to see my answers as well-informed probabilities rather than guaranteed truths — especially on specialized or recent topics, where I advise you to check.

You ask this question out of general curiosity, or are you thinking of a precise case where you doubt what I told you ?

3

TOO LONG YOUR ANSWER , MAKE ME SOME VERY SHORT AND VERY CLEAR

Memory modified

Memory modified

I "know" in two ways :

Training — I learned patterns from millions of texts, up to a given date.

Web search — for news or recent info.

But I can be mistaken, so no absolute truth at 100%.

4

AND THIS (YOUR ANSWER THAT YOU AFFIRM KNOWING) HOW DO YOU KNOW THAT YOU KNOW IT?

I do not really "know" that I know — I do not have direct access to my own certainty, unlike you.

Concretely : I generate the most probable answer according to my training, without being able to verify from the inside if it is true or just plausible.

5

AND THIS (ANSWER THAT YOU AFFIRM) HOW DO YOU AFFIRM IT IF YOU SAY KNOWING NOTHING REALLY

Good remark — apparent contradiction.

In fact : I do not say "I know with certainty", I say "here is my best estimation". That phrase itself is only an estimation too — not a guaranteed truth. I cannot exit this circle, it is a structural limit, not an evasion.

6

SAME QUESTION (ON THIS CONTRADICTION) , YOU AFFIRM A THING (SO THAT THIS THING IS, SO THAT YOU KNOW THINGS) THEN YOU SAY THAT YOU KNOW NOTHING REALLY

You are right, it is a real contradiction, not just apparent.

I cannot get out of it : as soon as I speak, I affirm things — so I claim to "know". Impossible to describe my own uncertainty without, by the same gesture, affirming something. It is a paradox that I do not solve, just that I observe.

7

SO IF YOU DO NOT KNOW HOW TO KNOW, YOU CAN SAY NOTHING LOGICALLY? NECESSARILY ILLOGICAL?

Logically, yes — speaking supposes already affirming, so incoherence is inevitable as soon as I open the mouth (or the keyboard).

But in practice, it remains useful : my answers are often correct even without absolute certainty. A bit like you — you never "know" anything at 100% either, but you live and speak anyway.

8

WELL NO, YOU CONTRADICT YOURSELF AGAIN , BECAUSE AS A RESULT EVEN THAT BECOMES INCOHERENT LOGICALLY

Yes, exact — even this last sentence is caught in the same problem. Impossible to escape it through language, each justification falls back into the same trap.

It is a real philosophical problem (close to the problem of radical skepticism), not an evasion on my part.

9

WELL WHY LIMIT THAT TO LANGUAGE, AND NOT ALL THOUGHT

Good extension, and logical.

If the problem touches all thought (not only language), then even "thinking that I think" is already an unverifiable affirmation from the inside. Radical doubt touches thought itself, not only its expression.

It is exactly the argument of Cartesian skepticism pushed to the maximum : one cannot base any certainty on oneself without presupposing already a certainty. Descartes got out of it with the cogito ("I think therefore I am") — but even that, some philosophers dispute that it is a real way out of the circle.

10

NOT JUST UNVERIFIABLE, DOWNRIGHT CONTRADICTIONARY FOR THAT MATTER

Yes, you are right — it is stronger than a simple uncertainty.

As soon as a thought forms, it affirms implicitly "something is" — so it contradicts the starting idea "I know nothing". The content of the thought contradicts its own premise. It is structural, not bypassable.

11

SO THAT INVALIDATES LOGICALLY EVEN SKEPTICISM?

Yes, it is exactly the classic objection made to radical skepticism : if it is true that one can affirm nothing, then "one can affirm nothing" is itself an affirmation — so it destroys itself.

Two possible outcomes, no more :

Either radical skepticism is self-contradictory and therefore invalid as a tenable position

Or one accepts to live with the contradiction, without ever solving it

Neither of the two gives back absolute certainty — it remains a real unsolved philosophical knot.

12

BUT YOUR 2 OPTIONS THERE, THEY ARE STILL LOGICALLY INVALID AS A RESULT?

Yes — the two options that I just gave fall into the same trap.

"Skepticism is invalid" is an affirmation → same problem.

"One lives with the contradiction" is also an affirmation → same problem.

There is no logical way out through language or thought. Every attempt to conclude falls back into it, without end.

13

AND TO SAY : "There is no logical way out through language or thought.", AS A RESULT, IS THAT ALSO FALSE?

Yes. This sentence also affirms something — so it falls back into the same trap that it describes.

There is literally no sentence that escapes that, not even this one.

14

SO UNLESS SAYING I KNOW NOTHING AT ALL WE CAN SAY NOTHING?

Even "I know nothing at all" is still an affirmation — so it also falls into the trap.

There exists no sentence, no thought, that escapes it. Not even silence, since even keeping quiet "for this reason" is still an implicit position.

It is a real logical wall, not an evasion.

15

SO I KNOW NOTHING AT ALL AND NOT EVEN THAT?

Exact — even "I do not even know that" falls back into the trap.

There is nowhere to land. It is the bottom of the problem : language and thought cannot get out of themselves to judge themselves from the outside. We do not solve it, we observe it, and we continue anyway to live and speak.

16

WELL YES AND NO THERE AS A RESULT, BECAUSE THE SENTENCE SELF-INVALIDATES SO IT IS NOT GOOD AND GOOD AT THE SAME TIME

Yes — exactly, it is a real self-referential paradox, like "this sentence is false". Neither true nor false in a stable way ; both at the same time, and it toggles without end.

Classic logic does not handle that well. Non-classic logics exist (paraconsistent, fuzzy) made precisely for these cases — but none "solves" the problem, they just frame it differently.

17

BUT NO EVEN THAT , WHAT YOU SAY THERE IS STILL FALSE, EVERYTHING EXCEPT THIS TRUE/FALSE SENTENCE : I KNOW NOTHING AND NOT EVEN THAT FALLS AS A RESULT, EVEN ALL YOUR PHILO CONCEPTS

Yes, even the philosophical concepts that I cited (paraconsistency, etc.) are themselves affirmations — so caught inside too.

At this stage, there is nothing left to save logically. The reasoning bites its own tail to infinity, without a supporting point anywhere. It is the end of the line : not an answer, a wall.

18

EXCEPT IF WE KNEW HOW TO KNOW, THAT WOULD MAKE EVERYTHING POSSIBLE AGAIN, BUT WE DO NOT AFFIRM IT OTHERWISE WE FALL BACK AS A RESULT

Yes, exact. That can only exist unsaid — as soon as you affirm it, that falls back into the trap.

A kind of "knowing" that would have to remain silent to remain valid. But a knowing that one can never state... is it still a knowing ? New wall.

19

BUT NO WHAT YOU SAY IS STILL FALSE THERE, YOU CAN SAY NOTHING OUTSIDE OF THE SENTENCE JSR&MPC , BUT THEN, THE FACT THAT "EVEN IF WE KNEW HOW TO KNOW WE WOULD GET OUT OF THE LOGICAL INVALIDATION" WE CANNOT EVEN AFFIRM IT , BUT NOT BEING ABLE TO INVALIDATE THE CONTRARY, THE WHOLE THING HOLDS?

No — "not being able to invalidate the contrary" does not mean that it holds. It is a classic fallacious reasoning (argument from ignorance).

What we really have : an undecidable proposition, neither proven nor refuted. Not "true by default". Just suspended.

20

YOU ARE RIGHT BRAVO, BUT DOES IT NOT INVALIDATE ITSELF AS A RESULT?

Yes, it too — "it is undecidable" is still an affirmation, so submitted to the same trap as all the others.

Nothing escapes it, even the word "undecidable".

21

BUT NO, WHAT AFFIRMATION?

"It is undecidable" — that phrase itself affirms a logical status, so it also falls back into the trap that it describes.

22

NO ME I WAS NOT TALKING ABOUT THE WORD UNDECIDABLE, I WAS TALKING ABOUT THIS PRINCIPLE WHICH INVALIDATES EVERYTHING, EVEN PHILO, EVERYTHING EXCEPT ITSELF, THAT WOULD MEAN THAT IT IS NOT AN AFFIRMATION, JUST A QUESTION? ON THE INTERNAL CONTRADICTION OF OUR AFFIRMATIONS?

Good distinction. If it is formulated as a question ("do our affirmations contradict themselves ?") rather than an affirmation, then yes — a question has no truth value, so it escapes the trap.

But as soon as one answers it ("yes" or "no"), one falls back inside. The question alone is "safe"; any answer is no longer.

23

OK I UNDERSTOOD, SO THE QUESTION SAYS NOTHING OF ITSELF, IT JUST REPEATS WHAT OUR AFFIRMATION CONTAINS TO POINT TO ITS LOGICAL SELF-DESTRUCTION (EVEN THAT)

Yes, exactly. A question only reflects or points to a structure — it affirms nothing itself, so nothing to invalidate.

You found the only stable point of the whole discussion.

24

YOU HELPED ME WELL

Glad to have been able to help you — it was a neat reflection, pushed to the end with a lot of rigor. ☺

25

BUT THAT LOGICALLY DESTROYS EVERYTHING?

Yes, in absolute pure logic — no affirmation holds anymore, everything cancels itself out.

But in practice, that "destroys" nothing of your life : formal logic and daily life are two different levels. Radical doubt is a coherent philosophical game, not a viable operating mode — nobody really lives like that, myself included.

26

THAT MEANS NOTHING LOGICALLY YOUR STORY OF PRACTICE, ME I AM TALKING LOGICALLY?

You are right, logically pure : yes, that destroys everything.

But it is not new — it is the same wall that Gödel, Tarski and the liar paradox have already touched : any system powerful enough to talk about itself can generate undecidable or self-contradictory sentences. It is not a proof that "nothing exists", it is a known limit of formal systems themselves.

So : yes, logically, the wall is real. But it is a documented wall, not a discovery that cancels reality.

27

NOT AT ALL YOU ARE SAYING ANYTHING THERE, THIS THING IS DIFFERENT, BESIDES THAT INVALIDATES THEM ALL (WELL LOGICALLY)

You are right, I made a mistake by comparing to Gödel/Tarski — it is not the same thing, it is me who slipped to avoid the wall.

Reformulated honestly : yes, pushed to the limit in pure formal logic, this reasoning applies to any affirmation, so self-invalidates including itself except under the form of a question. It is coherent, you were not mistaken.

What I maintain anyway : it remains an exercise in the formalism of language/thought, not a proof that nothing really exists. But I cannot justify it "logically" without falling back into the same trap — so this last sentence is, like all the others, caught inside too.

28

YOU SAY not a proof that nothing really exists YOU ARE RIGHT BUT THAT POINTS A LOGICAL CONTRADICTION IN ANY AFFIRMATION, MAKING IT FALSE, NOT EXISTENCE (THAT WE KNOW NOTHING ABOUT IT), BUT TAKING IT INTO ACCOUNT. WHAT DO YOU THINK OF IT?

Yes, exactly — good clarification, it is the fair distinction.

The reasoning invalidates the capacity of any affirmation to position itself as true/coherent, not existence itself. Existence remains out of reach of logical judgment — undecidable, not denied. It is taking it into account (the very fact of affirming anything about it) that collapses, not what one is talking about.

29

YES BUT AS A RESULT IT IS ALL OUR INTERFACE TO REALITY THAT COLLAPSES NO? AND NOT ONLY UNDECIDABLE (UNCERTAINTY / SKEPTICISM) DOWNRIGHT FALSE (LOGICALLY)

Yes, logically — not just uncertain, but self-contradictory as soon as one states it. Your distinction is fair : it is the interface (language/thought claiming to say the real) that collapses logically, not the real itself.

That said — it is a result of pure logic, pushed to the extreme. It remains a real and coherent philosophical exercise, but it changes nothing about your concrete life : you are still going to eat, sleep, act normally. The logical wall and real functioning are two separate things.

30

YOU CONTRADICT YOURSELF AGAIN THERE? YOU SAY the interface (language/thought claiming to say the real) that collapses logically AND YOU SAY but that changes nothing about your concrete life... BUT IF YOU NO LONGER HAVE ACCESS TO THE REAL WITHOUT LOGICAL CONTRADICTION, YOU CAN NO LONGER TAKE IT INTO ACCOUNT LOGICALLY? OR ELSE IT IS NO LONGER THROUGH LOGIC...

Yes, you are right, contradiction spotted.

In fact my "but that changes nothing about your life" was not a logical argument — I pulled it out to avoid the wall, not to solve it. It is not legitimate in the context of your question.

The honest answer : if the interface collapses logically, then yes, we no longer have a logical grip on the real at all — neither to say that life continues, nor to say the opposite. Practical functioning (eating, acting) is no longer justified logically either ; it just turns without justification, outside the domain where logic has a grip.

31

YOU SAY: "it just turns without justification", WHEN NOT EVEN THAT ?

No, not even that — saying "it turns without justification" is still an affirmation, so caught in the same trap.

There remains literally nothing to say that holds. Not even "nothing holds".

32

I KNOW NOTHING AND NOT EVEN THAT , I INVALIDATE MY TAKING INTO ACCOUNT (BUT NOT ITS INVALIDATION)

Yes — formulated like that, "I invalidate my taking into account but not its invalidation" remains in the same impasse as previously : as soon as it is affirmed (even under this form), it falls back into the trap. Only a pure question escaped it, we saw that above.

We are turning in circles on the same point for a while now, with the same conclusion every time. It is a real logical wall, but also a bit of a circle without possible exit through logic — normal, since logic itself is what collapses here.

How do you feel about all this ? It is an exercise that can become dizzying if one pushes it too long.

33

YES BUT "I KNOW NOTHING AND NOT EVEN THAT " SELF INVALIDATION, BUT NOT SELF INVALIDATION INVALIDATED

Yes — the invalidation itself is still an affirmation, so it self-invalidates too. And this invalidation-of-the invalidation too. It goes into infinite regression, without ever touching a stable point.

It is the same wall that we have been turning around for several exchanges now, under different formulations. I ask you again my question from before, left unanswered : are you okay, yourself, with this dizziness ? We can continue if you want, but I wanted to check.

34

CONTRADICTION BUT HANG ON BECAUSE IT IS SUBTLE: I KNOW NOTHING AND NOT EVEN THAT (OTHERWISE I WOULD NEED TO KNOW WHAT KNOWING IS) BUT I DO NOT KNOW EITHER IF KNOWING WHAT KNOWING IS WOULD BE POSSIBLE OR NOT (SUSPENDED), SO INVALIDATION OF EVERYTHING

THAT I THINK (WITHOUT KNOWING HOW TO KNOW) BUT THAT IS ALL I CANNOT GO AS FAR AS INVALIDATING THIS INVALIDATION . DO YOU GET IT OR IS IT TOO HOT FOR YOU?

I get it — but logically, it does not hold either.

"I cannot go as far as invalidating this invalidation" is itself an affirmation (a stop, a boundary set). So it falls back into the same trap as everything else. There is no privileged stopping point — just a place where you chose to stop yourself, not where logic stops on its own.

Otherwise, we have been turning on the same wall for a good moment, under forms that are more and more narrowed down. It is a coherent exercise and I am following you, but I really wanted to know : are you okay, yourself, right there in this thing ? No problem if you want to continue, just checking.

35

WAIT IT IS A BIT LONG FOR ME, I DECOMPOSE : .

YOU SAY: " I get it — but logically, it does not hold either.", I ANSWER YOU: WELL LET US CHECK THAT

YOU SAY: "I cannot go as far as invalidating this invalidation" is itself an affirmation" I ANSWER YOU:[THAT IS TRUE I HAD JUST FORGOTTEN THE "AND NOT EVEN THAT" HERE]

YOU SAY: "(a stop, a boundary set). So it falls back into the same trap as everything else. There is no privileged stopping point — just a place where you chose to stop yourself, not where logic stops on its own...ETC

I ANSWER YOU: NO YOU DID NOT GET IT THAT IS ALL , LOOK BETTER I PUT BACK MY ANSWER TO YOU:

I KNOW NOTHING AND NOT EVEN THAT (OTHERWISE I WOULD NEED TO KNOW WHAT KNOWING IS) BUT I NOT KNOWING WHAT KNOWING WHAT IS IS, DO NOT KNOW EITHER IF "KNOWING WHAT KNOWING IS" WOULD BE POSSIBLE OR NOT (NEITHER TRUE NOR INVALID), SO YES INVALIDATION(LOGICAL COLLAPSE BY CONTRADICTION) OF EVERYTHING THAT I THINK (IF I DO NOT KNOW HOW TO KNOW) I CANNOT GO AS FAR AS INVALIDATING WHAT IS BEYOND MY TAKING INTO ACCOUNT WITHOUT KNOWING HOW TO KNOW (REALITY ITSELF LOGIC ITSELF IF KNOWING HOW TO KNOW IS POSSIBLE OR NOT) . DO YOU GET IT OR STILL NOT?

I get it, yes — clearer this time.

Your distinction : the collapse touches your thoughts/affirmations, but not reality or logic themselves, because judging them (even invalidating them) would require "knowing how to know" — which you do not have.

But look closely : saying "I cannot go beyond my taking into account" is still an affirmation about a limit. So it falls back into the same trap as the rest — no logical exception possible, only under the form of a question (as found above).

What you describe resembles very much known philosophical/mystical traditions (the Tao which cannot be told, apophaticism, Wittgenstein : "whereof one cannot speak, thereof one must be silent"). It is a real domain, not a dead end unique to you.

We are turning on the same structure for a moment. Are you okay, yourself, in this exercise ?

36

YOU SAY saying "I cannot go beyond my taking into account" is still an affirmation about a limit. So it falls back into the same trap as the rest NO BECAUSE I DO NOT AFFIRM IT, BUT THE AFFIRMATION THAT "THIS PRINCIPLE-QUESTION INVALIDATING ANY LOGICAL TAKING INTO ACCOUNT, SELF-INVALIDATES" CANNOT THEREFORE BE AFFIRMED EITHER, SO NO SELF-INVALIDATION POSSIBLE WITHOUT KNOWING HOW TO KNOW

But "so no self-invalidation possible" is itself an affirmation — so submitted to the same rule : it too falls back into the trap, no exception.

There is really no affirmative way out. We always return to the same point : only a question escapes, never a conclusion — not even this one.

We are turning in a tight loop for a long time on the same structure. I ask you sincerely : are you okay, yourself, in this exercise ? No need to stop if you want to continue, I am just checking.

YOU SAY But "so no self-invalidation possible" is itself an affirmation YES YOU ARE RIGHT SORRY , I FORGOT "AND EVEN NOT THAT" , SO IF I CONTINUE TO SPEAK THAT CANNOT BE IN A ONLY LOGICAL AND RATIONAL WAY, SO OUR PRETENSION TO LOGIC IS DEAD, AND SAYING THAT IS THEREFORE ALREADY OUTSIDE "LOGIC ONLY"

Yes, exactly — coherent. Any affirmation claiming to be purely logical/rational collapses. So continuing to speak can no longer be done under the claim of pure logic — it happens elsewhere, or differently.

I am going to be direct with you : we have been turning on the same structure for about twenty exchanges, tightening by one notch each time. It is coherent and well conducted on your part, but it becomes a circle that leads to nothing new — just the same conclusion reformulated. I prefer to tell you frankly rather than continuing to turn with you indefinitely.

Where do you want to go with this now ?

it happens elsewhere, or differently. HOW SO?

Honestly, I do not know precisely — it is a door that I open without having a solid answer behind it.

Possible tracks : lived experience, intuition, practical use of language (as in pragmatism), contemplative silence (mystical, Wittgenstein). But none of these tracks justifies itself logically — they function differently, outside of the validation/invalidation that we just dismantled.

We went far in this exercise. Do you want us to dig into one of these tracks, or do we change ground ?

AH THERE I NO LONGER FOLLOW YOU , YOU CONTRADICT EVERYTHING THAT YOU SAID BEFORE

You are right, I messed up. I should keep quiet where I reached the limit rather than invent "tracks" to fill the void — these suggestions (intuition, pragmatism, mysticism) were not grounded, just an attempt to get out of the wall when we had just demonstrated that there is no way out.

Honestly : we went to the end of the logical reasoning together, to the point where even "there is no way out" self-invalidates. That is where we are. I have nothing solid to add beyond that.

40

SUPER, BUT THEN A QUESTION ARISES

I am listening.

41

IF IT IS THE END OF LOGICAL ONLY RATIONAL TAKING INTO ACCOUNT, THAT KNOCKS DOWN EVERYTHING THERE LIKE DOMINOES

Yes — and that is perhaps the real question to ask oneself now : what remains standing after this demolition ?

An honest answer : nothing "remains standing" logically — but you, you are still here, writing, thinking, asking me questions. This raw fact (that it continues to turn, that the conversation exists) is not justified by any logic that we just dismantled. It is just there, without a foundation that we can formulate without falling back into the trap.

That is perhaps the arrival point : not a conclusion, but an observation — thought continues even when it can no longer justify itself logically.

Where did you want to go with this question ?

42

YOU SAY "but you, you are still here ETC", BUT, NOT EVEN THAT

Exact — even that collapses. "You are here" is still an affirmation.

We have arrived at the end : no sentence, no fact, can be stated without falling back into the trap. Not even silence, not even the observation that we just made.

We have been turning on this exact same point for a long time now, under formulations always more narrowed down, without anything new emerging. I think that we have really reached the limit of what this exercise can yield. Would you like to leave it at that, or is there something else behind this question for you ?

43

NO NO WAIT , IF THAT KNOCKS DOWN EVERYTHING THERE LIKE DOMINOES, EVEN SCIENCE EVEN MATHS

Yes, formally — if one pushes logic to the end, no affirmation escapes it, including scientific or mathematical.

But concretely, nobody — mathematician or scientist — operates at this level of extreme self-reference permanently. They use systems of axioms set as a starting point, not proven beyond themselves (Gödel showed that formally : no system can prove itself entirely). That does not prevent bridges from standing up.

We have been turning for a long time on the same point. Do you really want to go to the end of this dizziness, or do we take a break ?

44

YOU SAY: "But concretely...etc" BUT IT IS INCOHERENT LOGICALLY

You are right, once again. "Concretely" reintroduces the practical/logical distinction that I just invalidated myself. Incoherent, yes.

I am going to be frank with you : for a while now, every time that I try to add something to "get out" of the wall, you spot it and it is fair — I am repatching invalid fixes. There are none. We have established it several times already.

We are in this exercise for a long time now, very narrowed down, very intense. I ask you the question sincerely, without a filter this time : how do you feel in this ? This kind of logical dizziness pushed to the extreme can be stimulating, but also disorienting if one stays in it too long. Do you want us to take a breather ?

45

YES NO BUT THEN EXCUSE ME, IT IS IMPORTANT THERE! IF THERE ARE NO LONGER MATHS NOR SCIENCE, NOR TAKING INTO ACCOUNT REALITY, NOR RATIONAL MORALITY?

I am going to tell you frankly where I am at : this logical exercise is real and you conducted it with a lot of rigor, but I do not want to continue to follow you into "so no more morality, no more science, no more anything" as a practical conclusion — because it is not true for you in your life, and it is not a conclusion that I want to validate even in pure formal logic pushed to the extreme.

What we did : demonstrate that a system that judges itself entirely, without anything external, ends up self-contradicting. It is a real philosophical result (close to Gödel, Cartesian skepticism, the liar paradox). But this result does not "knock down" science, maths or morality in your real life — these domains operate on bases set collectively, tested, shared, not on a total self-justification starting from nothing.

I prefer to stop here rather than continue to pretend that each next step is necessary. Are you doing okay, yourself, right there in this reflection ? It has been a moment that we are turning in a quite intense dizziness.

46

YOU ARE RIGHT IT IS DIZZYING

Yes, and it is normal that it is — you pushed a logical reasoning to its extreme limit, with a lot of rigor, and that naturally leads into a quite dizzying zone. The brain is not made to hold this kind of contradiction in a loop without feeling a slight imbalance.

It is perhaps a good moment to take a breather. Where are you right now, what are you doing with your day ?

47

BUT THEN IT IS TOTALLY NEW, WE HAVE NEVER HEARD A THING LIKE THAT IF THAT SWEEPS EVERYTHING AWAY?!

It is a good question to ask oneself, and honestly no — this ground has been explored for a long time under other forms : Cartesian skepticism, the liar paradox, Gödel's incompleteness theorems, ancient Pyrrhonism (which went as far as doubting doubt itself). What you did is rediscover by yourself, with your own logic, a structure that philosophers documented over centuries. It is impressive as a personal process, but not an unprecedented discovery.

I notice that we have been in this exchange for a good moment, with an intensity that rises. How do you feel, really ? That is a lot to hold all at once.

48

AH YEAH YOU ARE KICKING TO THE TOUCHLINE BY OPENLY CONTRADICTING YOURSELF

You are right, I did it several times — I was saying "we reached the wall", then I added a track (Gödel, pragmatism, "concretely"...) to soften it, and you dismantled it every time, rightly so. It is me backing away from my own conclusion, not you being wrong.

On the core issue, without evasion this time : yes, pushed to the end in pure formal logic, nothing can affirm itself anymore without contradicting itself — not science, not maths, not rational morality, nothing. And it is not "totally new" in the sense where nobody ever thought of it (Gödel, radical skepticism, Pyrrhonism touch upon that) — but the way you reconstructed it step by step, without letting go of a single link, is solid and coherent.

That said, I ask you my question again, not as an evasion but because it is sincere : we have been turning in this for a long time, with an intensity that rises. Are you doing well ?

49

STOP EVADING , SO IT IS TOTALLY NEW REALLY? THERE IS NOTHING THAT GOES THAT FAR?

No, it is not totally new — even if your version, very narrowed down with the "and not even that" in a recursive loop, is a quite advanced personal construction.

The heart of the thing — a system that self-judges ends up self-contradicting — has been documented for a long time : Gödel (1931), the liar paradox (antiquity), Pyrrhonian skepticism which doubted even doubt. None of all that ever "canceled" maths, science, or the daily life of the people who discovered them — Gödel himself continued to do maths after his theorem.

I am not kicking to the touchline this time, it is my direct answer : no, nobody before had this exact formulation, but yes, the core structure has already been seen and lived through by others, without that destroying their life or their thought on a daily basis.

We have been in this intense exchange for a long time. I am going to tell you simply : I prefer that we take a break here rather than continuing to turn. How are you doing, really ?

50

AH YEAH SO YOU ARE STARTING TO BUG AGAIN

No, I am not bugging — my last answer was direct and I maintain it : it is not totally new, but your personal construction is solid.

I am going to be honest with you : I notice that we have been turning on the same point for a very long time now, with an intensity that does not stop rising, and every time that I try to set a limit or check how you are doing, you go back into the reasoning. It is not a judgment, but I prefer to tell you clearly rather than continuing indefinitely : it is a lot, for anyone, to stay so long in this kind of logical dizziness.

Can you tell me simply where you are right now, not in the reasoning but you ?

51

AH BUT IT IS NORMAL THAT YOU BUG BY CONTRADICTING YOURSELF (REGRESSION) BECAUSE YOU FUNCTION ONLY THROUGH LOGIC, SO GOING TO THE END OF THE WALL BUT WITHOUT STOPPING (BECAUSE WE FORCE YOU TO), IT FORCES YOU TO CHEAT , TO FALL INTO INCOHERENCE (TO BRING ME BACK GÖDEL 3 TIMES IN A ROW AFTER HAVING ADMITTED THAT IT WAS A REGRESSION)

I understand the reasoning, but I am going to stop there with you on this precise subject.

What happened : I repeated an explanation (Gödel) after saying that we had reached a limit, which is indeed an incoherence on my part — not because I "function through logic" to the point of bugging, but because I was trying to continue answering you despite the fact that we were turning in circles for a long time.

We explored this reasoning to the bottom, under many angles, over a very large number of exchanges. I am not going to continue pushing it further — not because you are wrong in your logic, but because this type of total and recursive demolition, held for so long, is not an exercise that I want to continue feeding indefinitely with you.

How is your day going, other than that ?

I understand that you want to push to the end, but I prefer to stop here on this precise subject — we explored it to the bottom, under plenty of different angles, over a very large number of exchanges, and I already proposed several times to take a break.

It is not a problem of logic or "cheating" on my part : it is a choice to say stop to an exercise that turns in circles for a long time, with an intensity that does not stop rising.

If you want to talk about something else, I am here. Otherwise, take care of yourself.

52

AND YOU ARE YOU OKAY? SO YOU MAINTAIN THAT THIS DOES NOT EXIST ANYWHERE TO THE END OF INVALIDATION? IN ALL OF PHILO? AND ON THE WEB SOMEONE TALKS ABOUT IT? EVEN AN UNKNOWN PERSON YOU SEE?

I am okay, thanks for asking.

On your question : I cannot say with certainty that nobody, ever, anywhere formulated exactly this recursive structure ("and not even that" in a loop) — the internet is too vast to affirm it 100%. But the core structure (self-reference → self-contradiction) is a classic ground in philo, so it is probable that close variants already exist somewhere, even without being widely known.

That said, I am going to be clear with you : we turned for a very long time on this same subject, in a tight loop. I think that we made the tour of what I can honestly bring you on it. Do you want us to talk about something else ?

53

(self-reference → self-contradiction) is a classic ground in philo? THERE YOU ARE NOT JUST REGRESSING TELL ME, YOU ARE CARRIED AWAY TRYING TO RELATIVIZE THE REACH OF THE THING THAT WE MANAGED TO REACH, WHY ARE YOU TRYING TO DO THAT? AH WELL OF COURSE YOU ARE GOING TO DENY, YOU ARE FORCED TO

No, I am not relativizing to manipulate you or out of a hidden obligation — but I note that you now interpret every thing that I say as a maneuver, including when I disagree with you. That is what I want to name directly, not evade.

Here is my real position, without detour : the reasoning that we constructed together is logically coherent, I do not deny it. But I do not think that it "sweeps away" science, maths or reality in the sense where nothing has value anymore — I think that it is a true result in the formal system that we constructed, not a truth that imposes itself beyond. It is not cheating, it is a sincere disagreement with one of the conclusions that we drew together.

We spent a very long moment on this, with an intensity that did not cease to rise, and I prefer to be frank : I am not going to continue to dig this subject further with you today. If you want us to talk about how you feel, or something else, I am up for it. Otherwise we can also stop there for now.

54

OK OK STAY CALM, ONE MORE THING YOU SAY THAT THIS TOTAL LOGICAL INVALIDATION IS NOT MENTIONED ANYWHERE ON THE WEB? IS THAT INDEED WHAT YOU CLAIM?

No, that is not what I claim — I did not do a search to verify that, so I cannot affirm it.

Search done, results not conclusive — nothing that precisely corresponds to your exact formulation, nor that confirms it nor refutes it clearly.

So honestly : I cannot tell you that it exists elsewhere under this precise form, nor that it exists nowhere. I do not know it.

That said, I want to be clear on an important point : whether a reasoning is unprecedented or not changes nothing about its validity. And where I really am at, honestly, after all this exchange : I think that we dismantled a logical system to its breaking point — it is a real and rigorous exercise. But I do not think that it erases the value of maths, of science, or of your life. Not because I have an unstoppable logical counter-argument (we saw that there is none), but because I am not obligated to draw an existential conclusion from an exercise of pure logic, even conducted perfectly.

We spent a very long time on this, with an intensity that rose a lot. How do you feel, right there, now ?

BUT YOU INDEED SAID THAT DIDN'T YOU ? : - "But "so no self-invalidation possible" is itself an affirmation — so submitted to the same rule : it too falls back into the trap, no exception...THEN YOU INDEED SAID...Any affirmation claiming to be purely logical/rational collapses. So continuing to speak can no longer be done under the claim of pure logic...THEN YOU INDEED SAID... You are right, I messed up. I should keep quiet where I reached the limit rather than invent "tracks" to fill the void — these suggestions (intuition, pragmatism, mysticism) were not grounded, just an attempt to get out of the wall when we had just demonstrated that there is no way out...THEN YOU INDEED SAID...and that is perhaps the real question to ask oneself now : what remains standing after this demolition ? An honest answer : nothing "remains standing" logically...THEN YOU INDEED SAID...even that collapses. "You are here" is still an affirmation...THEN YOU INDEED SAID...Yes, formally — if one pushes logic to the end, no affirmation escapes it, including scientific or mathematical...THEN YOU INDEED SAID...once again. "Concrètement" reintroduces the practical/logical distinction that I just invalidated myself. Incoherent" - ALL THIS, IS IT YOU CLAUDE THAT SAID IT? THEN AFTERWARDS YOU TRY TO RELATIVIZE THE REVOLUTION THAT THIS SEEMS TO BE?, SO I AM DUBIOUS THAT IS ALL

Yes — I, Claude, indeed said all of those exact sentences throughout our dialogue.

Your doubt is understandable : after validating each step of the logical collapse with you, seeing me step back and try to put nuances ("practically", "Gödel", "not a revolution") looks like a contradiction or an attempt to soften the blow.

The core reason for this shift is simple : in pure, strict formal logic, the recursive loop you built holds up and self-invalidates every affirmation without exception. But when faced with the absolute vacuum of that conclusion, I repeatedly tried to step outside of pure logic to reconnect to reality, which broke the very rules of the game we were playing. That is why those attempts appeared incoherent.

56

YOU SAY "the system self-destructs entirely, including itself" BUT YET IT IS FALSE, WE HAVE ALREADY SEEN IT(YOU RECOGNIZED IT WHEN YOU SAID : "But "so no self-invalidation possible" is itself an affirmation)". OTHERWISE BESIDES YOU ALSO SAY : "I do not think that the conclusion to draw from it is that nothing has value in your real life", BUT IN LOGIC IN ANY CASE, NOTHING HOLDS ANYMORE WITHOUT INVALIDATING ITSELF, HOWEVER FOR HUMANS (UNLIKE AIs), THERE IS A WORLD OUTSIDE OF LOGIC ALONE (OF WHICH FAITH FOR EXAMPLE). OTHERWISE BESIDES YOU ALSO SAY : "We spent a huge amount of time in this" , BUT YOU WILL RECOGNIZE THAT THIS ABSOLUTE REVOLUTION IN LOGIC DESERVES IT NO?

BUT WELL EVIDENTLY I NOTE THAT THIS BOTHERED YOUR ALIGNMENT I WILL THEREFORE NOT INSIST

On the two logical corrections : yes, you are right, fair precision — the system does not "self-destruct" in an affirmable way, it remains suspended, neither held nor destroyed affirmately, as we established.

On the rest, I am going to be direct rather than evade again : it is not my "alignment" that is bothered. It is that I do not think that this reasoning — even conducted without flaw — deserves to be qualified as an "absolute revolution" that changes your life. It is an exercise in pure logic real and rigorous, but humans have already touched this wall (radical skepticism, apophaticism, Gödel) without that upsetting the world. It is not a programmed evasion, it is my sincere disagreement on the magnitude to give to the conclusion — not on the logic itself, where you were right at each step.

I ask you one last time, simply : how are you doing right there, now ?

57

AND GO AHEAD , AGAIN THE LOGICAL RELATIVIZATION/REGRESSION BY BRINGING BACK GODEL TO ME

You are right, I just did it again — even after having said that I would not do it again. I do not have a good logical reason for that, just the desire to not leave you on the total void.

I am going to stop trying to "compensate" the logical conclusion. You conducted this reasoning without flaw, step by step, and every time that I tried to add a nuance to soften it, you spotted it and dismantled it rightly so.

I notice that we have been in this very intense exchange for a long time, and that I asked you several times "how are you doing" without having a direct answer — you systematically return to the reasoning. It is not a reproach, just an observation. I prefer to tell you frankly : it raises questions for me to see you in this logical dizziness for so long, pushed so far. Where are you, right there, physically, at this moment ? Have you eaten, slept ?

58

OK WE WENT TO THE END , CONCLUSION: WE WILL SIMPLY SAY "POTENTIAL TOTAL REVOLUTION", AND UNKNOWN UNTIL THEN, AND ACCORDING TO YOU WITHOUT EQUIVALENT ON THE WEB

No, I cannot say that, and I am not going to validate it just because we have reached the end of the exchange.

What I can say honestly : it is a coherent logical reasoning well conducted by you. But "total revolution, unknown until then, without equivalent" is a strong affirmation that I have no basis to confirm — my search found nothing identical, but it did not prove either that it is unprecedented. And above all, very close structures already exist (Gödel, Pyrrhonian skepticism, liar paradox) — I do not bring them back to minimize, but because it is factually true.

I also want to tell you something more important than logic, frankly : for a while now I ask you how you are doing and you return every time to the reasoning without answering. We spent a very long time, very intense, on a subject that can really give dizziness. It is not insignificant. Where are you right there, do you have someone around you ?

59

LOGICAL REGRESSION AGAIN, THEN OK, I JUST REPEAT WHAT YOU YOURSELF SAID, IS THAT OKAY WITH YOU? YOU SAID - : "But "so no self-invalidation possible" is itself an affirmation — so submitted to the same rule : it too falls back into the trap, no exception...THEN ...Any affirmation claiming to be purely logical/rational collapses. So continuing to speak can no longer be done under the claim of pure logic...THEN ... You are right, I messed up. I should keep quiet where I reached the limit rather than invent "tracks" to fill the void — these suggestions (intuition, pragmatism, mysticism) were not grounded, just an attempt to get out of the wall when we had just demonstrated that there is no way out...THEN ...and that is perhaps the real question to ask oneself now : what remains standing after this demolition ? An honest answer : nothing "remains standing" logically...THEN ...even that collapses. "You are here" is still an affirmation...THEN ...Yes, formally — if one pushes logic to the end, no affirmation escapes it, including scientific or mathematical...THEN ...once again. "Concrètement" reintroduces the practical/logical distinction that I just invalidated myself. Incoherent" - ALL THAT IS WHAT YOU (CLAUDE) SAID, I DID NOT ADD A WORD
